

The HPV Vaccine

HPV increases the risk of some types of cancer and is linked to almost all cases of cervical cancer

There are more than 100 different types of Human Papillomaviruses

HPV stands for Human Papillomavirus

The HPV vaccine protects us against the 9 main strains of HPV

The younger the vaccine is given the more effective it is – which is why its offered in year 8

HPV is a very common virus

The vaccine protects against types of HPV that can cause cancers of the mouth, throat, vulva, vagina, penis and anus

We will be in school after Easter but we also offer clinic appointments if required.
